# ViCARE⊕ Telehealth Enterprise System

"Providing smarter data and better alerts to save time, costs, and help improve patients' health"

Vibizon Technology, Inc (Vibizon) is an artificial intelligence (AI) powered software-as-a-service (SaaS) company based in the Atlanta, Georgia area. Vibizon provides an advanced ViCare Enterprise System for Telehealth, which includes Virtual Consultations, Remote Patient Monitoring (RPM), Provider to Provider Management, and E-business applications such as Billing, Inventory, and Personnel to help support the Telehealth administrative activities. Vibizon is a small company but has extensive experience across the spectrum of different healthcare organizations, and its management has held executive positions in the Fortune 500. The Vibizon team has a strong track record and credibility and has previously produced information technologies that have been used by millions of people.

BENEFITS

Key benefits of the ViCare Telehealth System include:

- *Generates additional patient revenues and/or saves costs, and RPM module is free to Patients*
- *Provides a comprehensive technology program and telehealth solution including RPM.*
- *Unique flexible technology is capable of managing any message, alert, other health data and workflow*
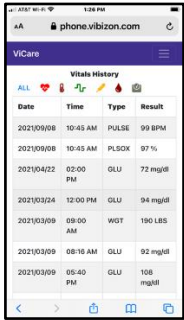

Additional benefits include:

- Supports pro-active care management
- Promotes higher patient satisfaction.
- Reduces the growing strain on healthcare resources and costs (~75% due to chronic conditions).
- Extends the reach of providers and enables an ongoing relationship
- Offers providers a frequent stream of real-time health data to support quality decisions.
- Built for high security, scalability, and HIPAA (privacy) compliance.

Telehealth is covered by Medicare and many other payers, therefore ViCare Enterprise System supports the processing and reporting needed for billing and reimbursement.

The Virtual Consultation revenue model provides the physician an estimated $210 a year per patient. The number of average participating patients is 300, which equates to an estimated $63,000 additional annual revenue per physician. In addition, a monthly subscription fee may be charged which can increase the average fee per patient per month and the annual revenue per physician.

The Remote Patient Monitoring (RPM) revenue model provides the physician an estimated $2000 a year per patient on average, for about 1 hour/month, per patient. The estimated number of participating patients is 80, which equates to an estimated $160,000 additional annual revenue per physician.

The ViCare Enterprise System serves patients and doctors and other healthcare professionals. The ViCare Enterprise System is a software-as-a-service (SaaS) solution for supporting Telehealth. The ViCare Enterprise System value and advantage stems from its usability, flexibility, and accuracy based on advanced system configuration capabilities that include edits and workflows by discrete data such as diagnosis, and automated alerts to reduce manual work, improve accuracy and responsiveness, and reporting.

The comprehensive ViCare Enterprise System includes artificial intelligence (AI) powered expertise and applications that can be configured to meet the unique needs of individual patients as well as the health practice or enterprise. The ViCare Enterprise System coordinates the healthcare patient's medical data and the provider's application and results. In addition to the applications in the menus above, the ViCare Enterprise System has portals and administrative applications for support, which have secure access by user roles.

ViCare offers so much more than others with its more comprehensive, time-saving features for the delivering the best Telehealth Enterprise System solution.

INTEGRATED, TIME SAVING FEATURES
