

Vibizon VCare is a cloud-hosted configurable coordinating system to support Remote Patient Monitoring (RPM) & Disease Management in healthcare organizations.

- ▶ **Registration**: Enroll patients who need regular home physiologic monitoring or import patient info from other systems such as practice management & ADT apps. Includes patient accounts, eligibility, notes, contacts, & document and image management.
- ▶ **Care Coordination**: Prescriptions and medication compliance, problem lists, allergies, demographics, events and diagnoses. Provides features to assist clinicians in targeting and supporting at-risk cases.
- ▶ **Case Management**: Case records, assigned case managers and care providers, call logging, notes, reminders, and custom questionnaires.
- ▶ **Remote Patient Monitoring**: Using medical devices at home, monitor patients' vital signs, other physiologic parameters, and self-administered test results. Graph daily results, trends over time, critical alerts and interventions. Improve overall communication and quality of patient care while reducing in-person visits and costs.
- ▶ **Population Health analytics**: Includes patient monitoring data, case data, and the ability to manage the knowledge based on payer contracts and best practice protocols. Assess overall health, find exceptions, and improve patient outcomes.

VIBIZON VCARE+

A Configurable Coordinating System for RPM

- ▶ Billing for Medicare RPM services is a new physician revenue stream opportunity (>\$100/mo./per patient).
- ▶ 3 new CPT codes for chronic care remote physiologic monitoring approved by CMS in 2019.
- ▶ CPT 99453--patient onboarding; device set-up; patient education.
- ▶ CPT 99454--Transmit data and alerts. Bill monthly.
- ▶ CPT 99457--Treatment management by provider or qualified staff; interactive communication with patient or caregiver. Bill monthly.

- ▶ Software Provided:
- ▶ Registration & ADT; Program enrollment.
- ▶ Medical record components such as problem list, RX and medications, lab results.
- ▶ Telehealth vital sign feed for real time monitoring. Inventory management for medical devices.
- ▶ Events: Temperature, Blood Pressure, Heart Rate, Glucose, Pulse Oxygen, Weight, BMI.
- ▶ Customizable alerts based on patient profile.
- ▶ Interventions: Calls, reminders, medication changes.

2. Patient Import

Import patients from EHR/PMS or enter manually.

3. Registration

Register patients. Updates, insurance view.

4. Load Device Inventory

Enter all the medical devices into inventory with appropriate IDs, Serial #s

1. Add Physician

Profiles and parameters for Provider, Organization, Customer, User

5. RPM Enrollment

Enroll patient, add case, assign to roster, then assign medical device. Receive remotely generated patient data.

8. Billing Data

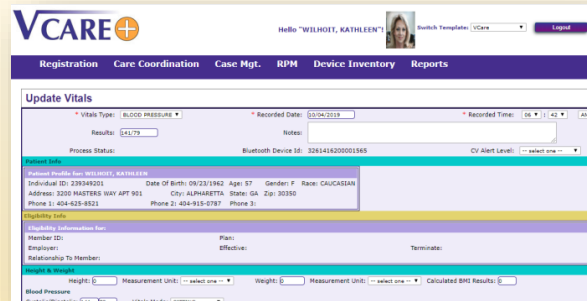

Document date and time for patient-submitted data and all intervention activity. Print monthly report on patients who qualify to bill.

6. RPM Assessment

VCare AI algorithm assesses RPM data for exceeding patient-specific parameters. Alerts generated and providers informed.

7. Patient Monitoring

Readings visible in vitals view, RPM work queue and patient dashboard. Create notes on interventions. Report on patient monthly.
