RPM Process Flow

Vibizon ViCare System is a cloud-hosted configurable coordinating program to support Remote Patient Monitoring (RPM) & Disease Management in healthcare organizations.

- ▶ Registration: Enroll patients who need regular home monitoring or import patient info from other systems such as practice management & ADT apps. Includes patient accounts, eligibility, notes, contacts, & document and image management.
- ▶ Virtual Consultation: Document a virtual encounter. Video chat with patients securely.
- ▶ Care Coordination: Prescriptions and medication compliance, problem lists, allergies, demographics, events and diagnoses. Provides features to assist clinicians in targeting and supporting at-risk cases.
- ▶ Case Management: Case records, assigned case managers and care providers, call logging, notes, reminders, and custom questionnaires.
- ▶ Remote Patient Monitoring: Using medical devices at home, monitor patients' vital signs and self-administered test results. Graph daily results, trends over time, critical alerts and interventions. Improve overall communication and quality of patient care while reducing in-person visits and costs.
- ▶ Population Health analytics: Includes patient monitoring data, case data, and the ability to manage the knowledge based on payer contracts and best practice protocols. Assess overall health, find exceptions, and improve patient outcomes.

A Configurable Coordinating Program for RPM

- ▶ Billing for Medicare RPM services is a new physician revenue stream opportunity (>\$100/mo./per patient).
- ▶ 3 new CPT codes approved by CMS in January 2020.
- ▶ Initiating the patient enrollment with set up of devices and tie them in digitally. A one-time charge.
- ▶ Monitor digital information, where the patient submits readings at least 17 days per month. Tech fee.
- ▶ Assess alerts, interventions and adherence to care plans. Physician fee.

- ▶ Software Provided:
- ▶ Registration & ADT; Program enrollment.
- ▶ Medical record components such as H&P, RX and medications, lab results.
- ▶ Telehealth vital sign feed for real time monitoring. Inventory management for medical devices
- ▶ Events: Blood Pressure, Heart Rate, Glucose, Pulse Oxygen, Weight, BMI.
- ▶ Alerts to manage parameters by patient and indicators.
- ▶ Interventions: Video Calls, reminders, medication changes.
